**Listing of Claims**

Claim 1-5 (cancelled)

Claim 6 (withdrawn): A method of preparing a synthesized plasmid combined from at least two DNA fragments comprising:

- (a) preparing a linear replication origin DNA fragment;
- (b) preparing a linear selection marker gene DNA fragment;
- (c) combining the DNA fragments prepared from steps (a) and (b) to form a circular synthesized plasmid without using a whole existing plasmid as a structure template;
- (d) introducing the plasmid made from step (c) into a host cell; and
- (e) selecting the plasmid with appropriate replication origin and selection marker from transformed host cells.

Claim 7 (withdrawn): The method according to claim 6, wherein any DNA fragment alone used for combining the synthesized plasmid cannot confer both autonomous DNA replication and selection to a plasmid.

Claim 8 (withdrawn): The method according to claim 6, wherein the linear DNA fragments of steps (a) and (b) are prepared from polymerase chain reaction.

Claim 9 (withdrawn): The method according to claim 6, wherein the linear DNA fragments of steps (a) and (b) are prepared from restriction digestion.

Claim 10 (withdrawn): A method of using a synthesized plasmid comprising:

- (a) Linearizing the synthesized plasmid;

- (b) inserting one or more functional DNA fragments to the linearized plasmid to make other plasmids;
- (c) introducing the plasmids made from step (b) into host cells;
- (d) selecting the plasmids and host cells with desired properties; and
- (e) using the plasmids and host cells for biomedical applications.

Claim 11 (withdrawn): The method according to claim 10, wherein linearizing the plasmid was achieved by restriction digestion.

Claim 12 (withdrawn): The method according to claim 10, wherein linearizing the plasmid was achieved by PCR.

Claim 13 (withdrawn): The method according to claim 10, wherein the functional DNA fragments encode a promoter, a regulatory sequence, a ribosome binding site, restriction sites, a terminator, a polypeptide, a replication origin, and a selection marker gene.

Claim 14 (withdrawn): The method according to claim 10, wherein the desired properties are plasmid replication, selection, and the properties added by functional DNA fragments inserted from step (b).

Claim 15 (withdrawn): The method according to claim 10, wherein the biomedical applications are DNA cloning, DNA amplification, gene expression, gene therapy, and DNA immunization.

Claim 16-20 (Cancelled)

Claim 21 (New): A synthesized plasmid comprising:

- (a) the DNA sequence defined by SEQ ID NO: 32, or

- (b) the DNA sequence defined by SEQ ID NO: 33, or
- (c) the DNA sequence defined by SEQ ID NO: 34, or
- (d) the DNA sequence defined by SEQ ID NO: 35, or
- (e) the DNA sequence defined by SEQ ID NO: 36, or
- (f) the DNA sequence defined by SEQ ID NO: 37, or
- (g) the DNA sequence defined by SEQ ID NO: 38, or
- (h) the DNA sequence defined by SEQ ID NO: 39, or
- (i) the DNA sequence defined by SEQ ID NO: 40, or
- (j) the DNA sequence defined by SEQ ID NO: 41

Claim 22 (New): A DNA fragment comprising the plasmid according to claim 21.

Claim 23 (New): A DNA vector comprising the plasmid according to claim 21.

Claim 24 (New): A bacterial cell strain comprising the DNA vector according to claim 23.

Claim 25 (New): A eukaryotic cell line comprising the DNA vector according to claim 23.
